The International Conference on Automated Planning and Scheduling (ICAPS) is the premier forum for new research results on the theory and applications of planning and scheduling technology. ICAPS 2026, the 36th International Conference on Automated Planning and Scheduling, was held in Dublin, Ireland from June 27 to July 2, 2026. Conference co-chairs were Adi Botea and Alfonso Emilio Gerevini. The conference program co-chairs were Amanda Coles, Wheeler Ruml, and Sandhya Saisubramanian. The papers published at ICAPS 2026 include papers from the main track and four special tracks: Human-Aware Planning and Scheduling, Applications of Planning & Scheduling, Learning for Planning & Scheduling, and Planning & Scheduling in Robotics. All of these special tracks were chaired by two

experts in the relevant disciplines. All papers present the latest advances in the field of automated planning and scheduling, ranging in scope from theoretical analyses of planning and scheduling problems and processes, to new algorithms for planning and scheduling under various constraints and assumptions, to empirical evaluation of planning and scheduling techniques in practical applications.

The International Conference on Automated Planning and Scheduling came about from the merging of the International AI Planning and Scheduling Conference (AIPS) and the European Conference on Planning (ECP). Although the first conference under the new name was held in 2003, the organizers have honored the numbering of the two previous conferences. AAAI Press has published all of the previous ICAPS proceedings, and most of the prior AIPS proceedings, but none of the ECP proceedings.
